

Applied Logistics, Graduate Certificate (Online)

The Graduate Certificate in Applied Logistics is designed to prepare students to be agile in the changing warehousing and distribution industry. Students study how to handle challenges that arise quickly and have an opportunity to develop leadership and project management skills to help communicate to customers, avoid reactionary responses, work collaboratively to find a solution, and effectively communicate across the supply chain and with customers. By integrating systems thinking with training in the technical applications in logistics, students gain well-rounded experience that allows them to understand and adapt to strategic imperatives while also being able to execute in detail.
