

Artificial Intelligence and Chemistry, BS (Boston)

The artificial intelligence and chemistry major combines chemistry, data science, and mathematics to give students both breadth and depth in chemistry and artificial intelligence fundamentals. During their course of study, students have an opportunity to develop qualitative and quantitative problem-solving skills as well as effective communication skills. Students will study the collection, manipulation, storage, retrieval, and computational analysis of chemical and other scientific data in its various forms including numeric, textual, image, and video data from small to large volumes. The program engages students in rigorous coursework designed to prepare students to interpret the ever-expanding knowledge base.
