

Artificial Intelligence and Environmental and Sustainability Sciences, BS (Boston)

The artificial intelligence and environmental and sustainability sciences combined major focuses on major environmental challenges facing our planet and provides broad training to understand how these challenges can be met through advances in artificial intelligence. Understanding these processes requires acquisition and analysis of large amounts of data—an ideal fit with artificial intelligence, where students study the collection, manipulation, storage, retrieval, and computational analysis of data in its various forms, including numeric, textual, image, and video data from small to large volumes.
